Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, drawn to a method of creating a classification system and applying a classification system for research, classified in class 705, subclasses 4 and 7.
- II. Claims 22-31, drawn to a programmed computer system and storage media , classified in class 700, subclass 89.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus can be used to practice another and materially different process, in particular, any process capable of being performed by a conventional desktop computer. For example, the apparatus of group II could be used for word processing, connecting to the Internet, processing digital photographs, etc.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

If applicant elects Group I above, an additional restriction requirement is applicable.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Art Unit: 3712

- I. Claims 13-21, drawn to a method of applying a classification system for research, classified in class 705, subclass 7.
- II. Claims 1-12, drawn to a method of creating a classification system, classified in class 705, subclass 4.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed, as evidenced by the use of multiple dependencies in the combination claims, indicating that the details of the subcombination can vary considerably and that particular features are not required for patentability. The subcombination has separate utility such as for as for insurance underwriting, consumer billing or performing business operations research. *→ NOT THE SAME AS THE CLAIMED UTILITY*

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any response to this office action must be made in writing.
